The construction of a new Latin library between the end of the Republic and the Augustan Principate was anything but an inhibiting factor. The literary flourishing of the Flavian age shows that awareness of this canon rather stimulated creative tension. In the changing socio-cultural context, daring innovations transform the genres of poetry and prose. This volume, which collects papers by influential scholars of early Imperial literature, sheds light on the productive dynamics of the ancient genre system and can also offer insightful perspectives to a non-classicist readership.

Esperanto, the most widely spoken constructed international auxiliary language, is estimated to have between 100,000 and 2,000,000 speakers worldwide. This extensive dictionary was compiled both from existing glossaries and from glossaries prepared by Denisowski.

This book provides an overview of passive and interactive analytical techniques for nuclear materials. The book aims to update readers on new techniques available and provide an introduction for those who are new to the topic or are looking to move into actinides and nuclear materials science. The characterization of actinide species and radioactive materials is vital for understanding how these elements and radioactive isotopes are formed and behave and how these materials can be improved. The analysis of the actinides or radioactive materials goes beyond spent fuel science to the applicable complete fuel cycle and including analysis of reactor materials.

Every year, the U.S. Army must select from an applicant pool in the hundreds of thousands to meet annual enlistment targets, currently numbering in the tens of thousands of new soldiers. A critical component of the selection process for enlisted service members is the formal assessments administered to applicants to determine their performance potential. Attrition for the U.S. military is hugely expensive. Every recruit that does not make it through basic training or beyond a first enlistment costs hundreds of thousands of dollars. Academic and other professional settings suffer similar losses when the wrong individuals are accepted into the wrong schools and programs or jobs and companies. Picking the right people from the start is becoming increasingly important in today's economy and in response to the growing numbers of applicants. Beyond cognitive tests of ability, what other attributes should selectors be considering to know whether an individual has the talent and the capability to perform as well as the mental and psychological drive to succeed? Measuring Human Capabilities: An Agenda for Basic Research on the Assessment of Individual and Group Performance Potential for Military Accession examines promising emerging theoretical, technological, and statistical advances that could provide scientifically valid new approaches and measurement capabilities to assess human capability. This report considers the basic research necessary to maximize the efficiency, accuracy, and effective use of human capability measures in the military's selection and initial occupational assignment process. The research recommendations of Measuring Human Capabilities will identify ways to supplement the Army's enlisted soldier accession system with additional predictors of individual and collective performance. Although the primary audience for this report is the U.S. military, this book will be of interest to researchers of psychometrics, personnel selection and testing, team dynamics, cognitive ability, and measurement methods and technologies. Professionals interested in of the foundational science behind academic testing, job selection, and human resources management will also find this report of interest.

The Apostle Paul's reference to the tongues of angels (1 Cor 13.1) has always aroused curiosity, but it has rarely been the object of a history-of-traditions investigation. Few readers of Paul's words are aware of the numerous references and allusions to angelic languages in Jewish and Christian texts. John C. Poirier presents the first full-length study of the concept of angelic languages, and the most exhaustive attempt to assemble the evidence for that concept in ancient Jewish and early Christian texts. He discusses possible references to angelic languages in the New Testament, pseudepigraphic writings (both Jewish and Christian), the Dead Sea scrolls, rabbinic texts, patristic references, magical writings, and epigraphy. The discussion is divided between those witnesses that understand angels to speak Hebrew, and those that understand angels to speak an esoteric heavenly language.

Thomas Kelly's major study of the Beneventan chant reinstates one of the oldest surviving bodies of Western music: the Latin church music of southern Italy as it existed before the spread of Gregorian chant.

Esperanto, spoken by thousands of people across the world, is the most successful international language project. In this book, the French linguist and literary critic Pierre Janton describes the history of Esperanto since its invention in nineteenth-century Eastern Europe and offers a comprehensive linguistic description of the language. This book is the best general introduction to Esperanto and its role in the modern world. Rooted in the populism and internationalism of the late nineteenth century, Esperanto owes its origins in part to western European educational currents and in part to the cultural history of eastern European Jewry. It is a fascinating historical and sociological phenomenon as well as a remarkable linguistic system. The book contains a survey of today's movement for the promotion of Esperanto as an international language, and a description of the extensive literature in Esperanto, both original and translated. Janton also provides a survey of the other global language projects, explaining why Esperanto has prevailed.

Historischer Ueberblick und Edition (*The edition includes only some of the verses, one representative of each melody-type and subtype In any case, many of the verses not included in this edition, probably most, are late productions, and all adapt the standart melodies very exactly.*XI
