A presentation of the basic models of the most important economic agents (households, firms, the banking system etc.). The influence of ethics on the decisions of persons is discussed within the context of mutual influences of one person on another. It is shown that this leads to a Markov chain which converges to a final situation which in many cases is independent of the initial conditions. The book helps the reader to understand the interdependence of humanities and economics and how to model this interdependence in economics.

Praised for its authoritative coverage, Global Political Economy places the study of IPE in broad theoretical context and has been updated to cover the rise of populism, Brexit, the USMCA, US-China trade wars, tariffs, refugees and global migration, the Keynesian-monetarist debate, Fordism, automation, the "gig" economy, global value chains, climate change, cryptocurrencies, and the residual effects of global economic crises and regional relationships and impacts. Written by leading IPE scholar Theodore Cohn, now joined by his prolific colleague Andy Hira, this book equally emphasizes theory and practice to provide a framework for analyzing current events and long-term developments in the global economy. This text is suitable for both introductory and advanced IPE courses. New to the Eighth Edition Expands upon the growing US-China competition in many areas of the global political economy. Discusses the problems Brexit is posing for Britain and the European Union (EU). Explores the growth of populism. Focuses more on environmental degradation/climate change along with the increase in global migration. Incorporates a new theme of South-South global economic relations. Highlights the relationship among economics, geopolitics, and security issues. Emphasizes the importance of global value chains. Looks at the potential for future global financial crises. Updates and expands the number of tables, figures, and graphics throughout. Provides an updated Test Bank and new PowerPoint slides in an Instructor's e-Resource.

Macroeconomics teaches students to be young economists, providing a contemporary approach to the subject and a wealth of real-life case studies to allow students to understand how economics works in practice. Responding to the financial crisis, this text explains the modern approach to macroeconomics with simplicity and rigour, while retaining the focus on particular characteristics of the European economy. The authors analyse different theoretical approaches and contextualise theory with up-to-date monetary policy examples. Helpful learning features throughout the text including; boxes, chapter summaries, key concepts, end of chapter exercises, and essay questions, support students' learning, and the book is accompanied by an extensive Online Resource Centre designed to help students take their learning further. Online Resource Centre: Student Resources: Sample exam questions Multiple choice questions Review questions Web appendices Web links Lecturer Resources: Power Point slides Excel based exercises for macroeconomic modelling Lecture plans Case studies Revision questions Solutions to end-of-chapter exercises Test bank VLE cartridge

Questioning Financial Governance from a Feminist Perspective brings together feminist economists and feminist political economists from different countries located in North America and Europe to analyze the 'strategic silence' about gender in fiscal and monetary policy, and financial regulation. This silence reflects a set of assumptions that the key instruments of financial governance are gender-neutral. This often masks the ways in which financial governance operates to the disadvantage of women and reinforces gender inequality. This book examines both the transformations in the governance of finance that predate the financial crisis, as well as some dimension of the crisis itself. The transformations increasingly involved private as well as public forms of power, along with institutions of state and civil society, operating at the local, national, regional and global levels. An important aspect of these transformations has been the creation of policy rules (often enacted in laws) that limit the discretion of national policy makers with respect to fiscal, monetary, and financial sector policies. These policy rules tend to have inscribed in them a series of biases that have gender (as well as class and race-based) outcomes. The biases identified by the authors in the various chapters are the deflationary bias, male breadwinner bias, and commodification bias, adding two new biases: risk bias and creditor bias. The originality of the book is that its primary focus is on macroeconomic policies (fiscal and monetary) and financial governance from a feminist perspective with a focus on the gross domestic product and its fluctuations and growth, paid employment and inflation, the budget surplus/deficit, levels of government expenditure and tax revenue, and supply of money. The central findings are that the key instruments of financial governance are not gender neutral. Each chapter considers examples of financial governance, and how it relates to the gender order, including divisions of labour, and relations of power and privilege. This book is key

reading for anyone studying feminist economics, and should also be of interest to those researching macroeconomics, political economics and women ' s studies.

The book provides a collection of interesting analytical views on contemporaneous issues of development and international economics such as globalization, brain drain toward developed countries, the European business cycle ' s impact on African economies, the importance of capital maintenance for growth, and so on. The research results provided by the authors, of whom several are – or have been – members of the Académie Louvain, can be used as starting points for further development of the various covered fields. The book turns out to be a “ value-added ” contribution to economic literature advances and a remarkable opportunity to honor the memory of Michel Norro, who had a long-lasting career in teaching international economics and critiquing development policies, with a special focus on those which affect African economies. People interested in African economy analysis have inherited his valuable book *Économies africaines*.

The study of macroeconomics can seem a daunting project. The field is complex and sometimes poorly defined and there are a variety of competing approaches. It is easy for the senior bachelor and starting master student to get lost in the forest of macroeconomics and the mathematics it uses extensively. *Foundations of Modern Macroeconomics* is a guide book for the interested and ambitious student. Non-partisan in its approach, it deals with all the major topics, summarising the important approaches and providing the reader with a coherent angle on all aspects of macroeconomic thought. Each chapter deals with a separate area of macroeconomics, and each contains a summary section of key points and a further reading list. Using nothing more than undergraduate mathematical skills, it takes the student from basic IS-LM style macro models to the state of the art literature on Dynamic Stochastic General Equilibrium, explaining the mathematical tricks used where they are first introduced. Fully updated and substantially revised, this third edition of *Foundations of Modern Macroeconomics* now includes brand new chapters covering highly topical subjects such as dynamic programming, competitive risk sharing equilibria and the New Keynesian DSGE approach.

This text provides a comprehensive analysis of contemporary macroeconomics, within a European and global context. The authors balance the theoretical aspects with up-to-date policy examples throughout, allowing the reader to relate the concepts to their own economic environment.

This title provides a comprehensive overview of the development and design of the European Monetary Union, as well as an intriguing discussion of its prospects for future enlargement.

Revised and updated for the 2nd edition, this textbook guides the reader towards various aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, robots and involuntary unemployment, financial integration and house price dynamics, policies to mitigate climate change and the persistence of religion in a globalized market economy are explored. The first part starts from the “ old ” growth theory and bridges to the “ new ” growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter- and intra-sectoral trade, investigates innovation, growth and trade and limits to public debt as well as nationally and internationally optimal climate policies. The debt dynamics of the Euro Zone and the origins of intra-EMU and Asian-US trade imbalances are also explored. The book is primarily addressed to upper undergraduate and graduate students wishing to proceed to the analytically more demanding journal literature.

IS-LM is perhaps the prime example of ‘cognitive dissonance’ in economics, and is problematic to many economists. On the one hand, the IS-LM model is still taught by many academic economists or they use it to derive the AD-AS approach. On the other hand, the same economists realize the limitations of the basic IS-LM model and would not now use it for policy analysis, as they did in the past. The distinction between pedagogical and analytical efficacy is made by all the authors in this volume regarding the IS-LM model. Indeed, even those who would reject using the model for modern policy analysis still see the basic model as useful for teaching purposes. Moreover, in an augmented form, some of the authors in this volume would even see fit to use IS-LM for modern policy analysis. As will be seen, therefore, the IS-LM model is ‘not yet dead’. Rather, the model’s ‘plasticity’ has enabled it to undergo a metamorphosis into augmented form, enabling its continuing utilization in economics accordingly.
