Fermentation Chapter 9

Cellular Respiration

Answer

This is because cellular
respiration is an
exergonic process that is

Get Free Chapter 9

only about 38%

efficient; the remaining energy is lost to the environment as heat.

Also, carbon dioxide is being converted to organic molecules such as fats and sugars during cellular respiration.

Complete the illustration by adding labels for the three main stages of cellular respiration.

Chapter 9: Cellular Respiration and Fermentation

Fred and Theresa
Holtzclaw. Chapter 9:
Cellular Respiration and
Fermentation. 1.

Explain the difference

Get Free Chapter 9

between fermentation and cellular respiration. Fermentation is a partial degradation of sugars or other organic fuel that occurs without the use of oxygen, while cellular respiration includes both aerobic and anaerobic processes, but is often used to refer to the aerobic process, in which oxygen is consumed as a reactant
