Blooming occurs during the first few years of life, and pruning continues through childhood and into adolescence in various areas of the brain. The size of our brains increases rapidly. For example, the brain of a 2-year-old is 55% of its adult size, and by 6 years old the brain is about 90% of its adult size (Tanner, 1978).

~~Childhood: Physical and Cognitive Development ...~~

From 1 to 2 Years. After reaching a year of age, children's physical, social, and cognitive development seems to grow by leaps and bounds. Children at this age spend a tremendous amount of time observing the actions of adults, so it is important for parents and caregivers to set good examples of behavior.

~~Cognitive Developmental Milestones~~

Developmental stage theories are theories that divide child development into distinct stages which are characterized by qualitative differences in behaviour.. There are a number of different views about the way in which psychological and physical development proceed throughout the life span.

Cognitive Development. In addition to rapid physical growth, young children also exhibit significant development of their cognitive abilities.

~~Stages of Development | Introduction to Psychology~~

Preoperational thinking occurs between 2 to 7 years and is marked by development of symbolic mental abilities. The sensorimotor stage occurs from birth to 2 years and is when children recognize permanence of objects. During adolescence, individuals establish an ideology and sexual orientation is fixed.

~~Chapter 11—Growth and Development; Infancy through ...~~

Child psychologist Jean Piaget documented cognitive changes beginning in adolescence through adulthood 1. He called this period of cognitive development formal operations. During this time, teenagers experience an intellectual growth spurt, where their thinking becomes more abstract and their problem-solving more systematic.
