Cognitive planning is one of the executive functions. It encompasses the neurological processes involved in the formulation, evaluation and selection of a sequence of thoughts and actions to achieve a desired goal. Various studies utilizing a combination of neuropsychological, neuropharmacological and functional neuroimaging approaches have suggested there is a positive relationship between impaired planning ability and damage to the frontal lobe .

Cognitive psychology involves the study of internal mental processes—all of the things that go on inside your brain, including perception, thinking, memory, attention, language, problem-solving, and learning. While it is a relatively young branch of psychology, it has quickly grown to become one of the most popular subfields.
