The DOK has 4 levels. Depth of Knowledge, or DOK, is a way to think about content complexity, not content difficulty. That is the first thing with which people must come to understanding. Complexity is different from difficulty. For example, if students have not seen the word or content before, it might be difficult for them, but it is not complex.

Dok-7 is a non-catalytic cytoplasmic adaptor protein that is expressed specifically in muscle and is essential for the formation of neuromuscular synapses. Further, Dok-7 contains pleckstrin homology (PH) and phosphotyrosine-binding (PTB) domains that are critical for Dok-7 function. Finally, mutations in Dok-7 are commonly found in patients with limb-girdle congenital myasthenia.

Dok-7 - Wikipedia
Congenital myasthenic syndrome. At least 45 mutations in the DOK7 gene have been found to cause congenital myasthenic syndrome. A mutation that frequently occurs is the addition of four DNA building blocks (nucleotides) in the DOK7 gene (written as 1124_1127dupTGCC). Mutations in this gene lead to the production of a defective Dok-7 protein that cannot activate the MuSK protein.
