This book disseminates original research on learning in and from practice in pre-service teacher education. Authors such as Lederman and Lederman describe the student teaching practicum (or work-integrated learning [WIL]), which is an essential component of pre-service teacher education, as the 'elephant in the room'. These authors note that 'the capstone experience in any teacher education programme is the student teaching practicum... [a]fter all, this is where the rubber hits the road'. However, many teacher educators will agree that this WIL component is sometimes very insufficient in assisting the student teacher to develop their own footing and voice as a teacher. This is the 'gap' that this research book addresses. Most of the chapters in the book report empirical data, with the exception of two chapters that can be categorized as systematic reviews. WIL is addressed from various angles in the chapters. Chapter 6 focuses on research related to what makes Finnish teacher education so effective, and in Chapter 4 researchers of the University of Johannesburg disseminate their findings on establishing a teaching school (based on Finnish insights) in Johannesburg. Chapter 3 highlights the challenges faced in open-and distance learning teacher education contexts. Several of the chapters disseminate research findings on alternative interventions to classic WIL, namely, where "safe spaces" or laboratories are created for student teachers to learn and grow professionally. These could either be simulations, such as software programmes and avatars in the intervention described in Chapter 2; student excursions, as the findings in chapters 5, 7 and 10 portray; or alternative approaches to WIL (e.g. Chapters 11 and 12). The book is devoted to scholarship in the field of pre-service teacher education. The target audience is scholars working in the fields of pre-service teacher education, work-integrated learning, and self-directed learning. The book makes a unique contribution in terms of firstly its extensive use of Cultural-Historical Activity Theory as a research lens, and secondly in drawing on various theoretical frameworks. Both quantitative and qualitative research informed the findings of the book.

Educators need to empower learners to be prepared for the Fourth Industrial Revolution, to be thinkers with the ability to pioneer the future. This book cracks teaching and learning myths that led to learners being perceived as knowledge duplicators instead of being knowledge creators. Thinking tools move the focus of learning from mastering content to critical thinking. This requires the critical thinking toolkit, which is the mothership of all thinking. It engages learners' forever-wandering minds with the learning task at hand, which is the substitute for the traditional expectations of "paying attention" and "memorising". When employing thinking tools, learners become thinking engineers-taking ownership of what they must discover, create or solve. Within this paradigm of teaching, teachers directly engage with learners' brains, which goes beyond learner-centred teaching and defining learning as visual, auditory or kinaesthetic. The book is based on examples of thinking tools sessions.

A hungry frog finds his lunch when a fly happens by the pond.

Study & Master Mathematical Literacy Grade 10 has been especially developed by an experienced author team according to the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Mathematical Literacy. The Teacher's File includes: * a weekly teaching schedule, divided into the four terms to guide the teacher on what to teach * extra project templates for teachers to choose from * solutions to all the activities in the Learner's Book.

Stock markets are not efficient, returns are incommensurate with risk, investors are irrational, bubbles and crashes recur regularly, analysts are usually wrong, economists even more so, luck is mostly mistaken for skill, myths and misconceptions abound and most of the industry participants are simply noise generators. This is even more true for emerging markets. South Africa can be termed a developed emerging market and is the newest member of the BRICS group. The Effective Investor is the first book to deal specifically with investing in the South African stock market, filling a surprising gap given the widespread interest that has been shown in South Africa as an emerging market and the gateway to the resource-rich African continent. Understanding the South African market provides insight into the paths that emerging and frontier markets will follow in future. While the investment lessons from the South African market outlined in this book are universal, understanding some of its peculiarities is also important. For example, some insight into the behaviour of the currency, the rand, is clearly critical in terms of any investment in this market, as well as in providing some understanding of other volatile emerging market currencies, as well as because it is often treated as the most liquid proxy for these currencies, particularly during upheavals. Similarly, the techniques highlighted in the book for dealing with volatility are applicable to similar markets elsewhere. South Africa is also an attractive market in its own right. It has been the third-best performing stock market in the world since 1900, and has weathered the great financial crisis with flying colors. The book provides readers with the findings of leading-edge research conducted into the South African stock market, the results of which are normally reserved for professional institutions and is written by a practicing, top-rated investment professional. The book also has guest contributions from some of South Africa's most astute professional analysts and fund managers on their specific areas of expertise, providing exceptional insight into current investment thinking. The Effective Investor is essential reading for every potential, novice or professional investor and investment adviser in emerging markets who wants to understand the most important principles of the South African stock market to ensure successful investing.

Study & Master Mathematical Literacy Grade 11 has been especially developed by an experienced author team according to the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Mathematical Literacy. The comprehensive Learner's Book includes: * thorough coverage of the basic skills topics to lay a sound foundation for the development of knowledge, skills and concepts in Mathematical Literacy * margin notes to assist learners with new concepts - especially Link boxes, that refer learners to the basic skills topics covered in Term 1, Unit 1-16 * ample examples with a strong visual input to connect Mathematical Literacy to everyday life.
