Data from HTDS provide a strong understanding on different aspects of pest biology and spatial repellents are a novel approach to control arthropod pests. Due to the importance of HTDS in arthropods belonging to diverse fields and the sublethal activity of spatial repellents, both HTDS and spatial repellents can provide a reliable method to control insect disease vectors and arthropod pests.

A new approach in capacity strengthening for entomology and vector control was thus required. A novel approach in capacity strengthening. In 2006 the ANVR conducted a rapid assessment of capacities in entomology and vector control at the level of ministries of health 4 in African countries. In order to systematize the

Acces PDF Entomology Novel Approaches

assessment, it was felt fundamental to clarify the minimum operating standards for effective vector surveillance by national malaria control programmes.
