Apollonius of Perga (Greek: Ἀπολλώνιος ὁ Περγαῖος; Latin: Apollonius Pergaeus; c.240 BC - c.190 BC) was an Ancient Greek geometer and astronomer known for his work on conic sections. Beginning from the contributions of Euclid and Archimedes on the topic, he brought them to the state prior to the invention of analytic geometry.

To illustrate how far Apollonius had taken geometric constructions beyond that of Euclid's Elements we consider results which are known to have been contained in Tangencies. In the Elements Book III Euclid shows how to draw a circle through three given points. He also shows how to draw a tangent to three given lines.

Euclid died c. 270 BC, presumably in Alexandria. In the only other key reference to Euclid, Pappus of Alexandria (c. 320 AD) briefly mentioned that Apollonius "spent a very long time with the pupils of Euclid at Alexandria, and it was thus that he acquired such a scientific habit of thought" c. 247-222 BC. Because the lack of biographical information is unusual for the period (extensive ...

It is likely that the first four books of Apollonius's work come directly from Euclid. According to Pappus, "Apollonius, having completed Euclid's four books of conics and added four others, handed down eight volumes of conics." The Conics of Apollonius quickly supplanted the former work, and by the time of Pappus, Euclid's work was already lost.

Euclid (330 B.C. - 275 B.C.) Greek mathematician. Together with Archimedes and Apollonius of Perga, after him, Euclid was soon included in the triad of the great mathematicians of Antiquity. However, in light of the immense influence that his work would exert throughout history, it must also be considered as one of the most illustrious of all times.
