The Ultimate Guide to the Solar System

The Solar System is the gravitationally bound system of the Sun and the objects that orbit it, either directly or indirectly. Of the objects that orbit the Sun directly, the largest are the eight planets, with the remainder being smaller objects, the dwarf planets and small Solar System bodies.

Solar System

Virtually all the light and heat in the solar system comes from the Sun , without that light and heat even the atmospheres of the planets would be frozen solid. The Main members of the Solar Family are the planets and their moons there a 9 planets and most of these have moons. Below is a list of the planets and their main moons.

ABSOLUTE BEGINNERS

Solar electricity panels, also known as photovoltaics (PV), capture the sun's energy and convert it into electricity that you can use in your home. Solar PV panels are made from photovoltaic cells, grouped together in modules. Since solar energy is a renewable resource, by installing solar panels you can generate your own renewable electricity.

Solar panels - Save energy at home
