Introduction Model theory is a branch of mathematical logic where we study mathematical structures by considering the first-order sentences true in those structures and the sets definable by first-order formulas. Traditionally there have been two principal themes in the subject:

This book is a modern introduction to model theory which stresses applications to algebra throughout the text. The first half of the book includes classical material on model construction techniques, type spaces, prime models, saturated models, countable models, and indiscernibles and their applications. The author also includes an introduction to stability theory beginning with Morley's Categoricity Theorem and concentrating on omega-stable theories.

INTRODUCTION TO MODEL THEORY 19 Proof. If Tis not satis able, then by Theorem 2.2 there is a proof of a contra-diction from T. As proofs use only nitely many assumptions from Tthere is a nite inconsistent subset of T. An important question when we try to axiomatize the properties of a structure

Introduction to Model Theory - MSR|

1. Introduction Model Theory is the part of mathematics which shows how to apply logic to the study of structures in pure mathematics. On the one hand it is the ultimate abstraction; on the other, it has immediate applications to every-day mathematics. The fundamental tenet of Model Theory is that mathematical truth, like all truth, is relative.

twenty years now is the book Model Theory by Chang and Keisler 1990, the last edition of which has been updated. The newer Hodges 1993, that carries the same title, might well rise to the same level of popularity in the near future. These are the books to look for more. For a multitude of ref-erences, see Vol. III (Model Theory) of the

Model Theory : An Introduction | David Marker | Springer

Model theory recognizes and is intimately concerned with a duality: it examines semantical elements (meaning and truth) by means of syntactical elements (formulas and proofs) of a corresponding language. In a summary definition, dating from 1973: model theory = universal algebra + logic.
