insulin. In a state of ketosis, ketone body production is increased when there are decreased carbohydrates or increased fatty acids.

*Biochemistry, Ketogenesis - StatPearls - NCBI Bookshelf*

Lipids are involved mainly with long-term energy storage. They are generally insoluble in polar substances such as water. Secondary functions of lipids include structural components (as in the case of phospholipids that are the major building block in cell membranes) and “messengers” (hormones) that play roles in communications within and between cells.

*What are Lipids and biological significance in Biochemistry?*

Vitamins play a vital role in many biochemical functions in the human body and are essential components for maintaining optimal health. There are two main groups of vitamins – fat-soluble (easily stored in fat upon absorption) and water-soluble (washed out and not easily stored). Although adequate intake of all vitamins is important, regular intake is required to avoid deficiency due to the ...
