Accurate Early Diagnosis Early Intervention For those with Autism Spectrum Disorders, Early Intervention, using evidence-based practices, is fundamental in improving the trajectory for an individual. Reliable diagnoses of ASD can be made as young as 20 -24 months; however, Wiggins et al. (2006) found a mean age of

Evidence-Based Assessment for Autism Spectrum Disorders
A variant of desert theory is the communicative theory of punishment, which takes both a forward-looking and a backward-looking view of the purposes of punishment. The purposes of punishment on a communicative account are both to convey the state's condemnation of the action and to lead the offender to repent her action and to reform her conduct.

Civil Disobedience (Stanford Encyclopedia of Philosophy)
Early identification of autism spectrum disorder (ASD) is essential to ensure that children can access specialized evidence-based interventions that can help to optimize long-term outcomes. Early identification also helps shorten the stressful "diagnostic odyssey" that many families experience before diagnosis. There have been important advances in research into the early development of ...
