Chemistry of Advanced Environmental Purification Processes of Water covers the fundamentals behind a broad spectrum of advanced purification processes for various types of water, showing numerous applications through worked examples. Purification processes for groundwater, soil water, reusable water, and raw water are examined where they are in use full-scale, as a pilot approach, or in the laboratory. This book also describes the production of ceramic particles (nanotechnology) and materials for the creation of filtration systems and catalysts that are involved. Uses chemistry fundamentals to explain the mechanisms behind the various purification processes Explains in detail process equipment and technical applications Describes the production of ceramic particles and other new materials applicable to filtration systems Includes worked examples

The sustained skin research efforts over the past decades has led to the accumulation of a significant collection of information on skin structure and physiology as well as on the pathogenesis of cutaneous diseases. In Molecular Dermatology: Methods and Protocols, leading experts in the field provide a collection of state-of-the-art reliable protocols covering a wide spectrum of techniques and experimental models, specific molecular assays and disease models, as well as overviews of diagnostic and research areas relevant to molecular dermatology. As a volume in the highly successful Methods in Molecular Biology™ series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Comprehensive and authoritative, Molecular Dermatology: Methods and Protocols emphasizes the vital importance of skin research and collects the methodologies necessary to aid scientists in moving forward in this valuable field.
