Test Driven Web Development with Spring Boot & React

Test Driven Development (TDD) is a strategy for ensuring code is sufficiently considered. A piece of functionality (typically a component in React, or a utility) is crafted not by writing code first, but by writing one or more tests (specs) first. Only when a test spec has been written can the code to satisfy the test be written.

Test Driven Development (TDD) with React, React Testing ...

The test driven development technique provides two others things: a to-do list and the refactor phase. The refactor phase is used to clean up the code. The to-do list is used to write down the steps required to complete the feature you are implementing. It also contains doubts or problems you discover during the process.

Test-driven development (TDD) is a process that has been documented considerably over recent years. A process of baking your tests right into your everyday coding, as opposed to a nagging afterthought, should be something that developers seek to make the norm, rather than some ideal fantasy. I will introduce the core concepts of TDD.
