Pet adoption is the process of taking responsibility for a pet that a previous owner has abandoned or released to a shelter or rescue organization. Common sources for adoptable pets are animal shelters and rescue groups. Some organizations give adopters ownership of the pet, while others use a guardianship model wherein the organization retains some control over the animal's future use or care.

[How to Prevent Future Problems.](#) Problems mainly seem to arise when dogs gulp down the rawhide chews in large pieces or even whole. This is why supervising a dog when eating a rawhide is a must and why it is very important to select the most appropriate rawhide chews for the dog's size and weight.

Mange is a parasitic skin disease caused by microscopic mites. Two different mange mites cause skin disease in dogs. Demodectic mange, sometimes just called 'demodex' or 'red mange', is the most common form of mange in dogs. Demodectic mange most often occurs when a dog has an immature immune system, allowing the number of skin mites to increase rapidly.

Evidence suggests that most dogs that eat grass aren't unwell beforehand, or at least they don't seem so. In fact, fewer than 10% of dogs seem to be sick before eating grass, according to their owners. And grass-eating doesn't usually lead to throwing up -- less than 25% of dogs that eat grass vomit regularly after grazing.
