The TruSeq Exome Kit supports 12-plex pre-enrichment library pooling, enabling researchers to maximize sequencing throughput and variant identification by sequencing up to 12 libraries per flow cell lane. This enables sequencing of more exomes per run, so researchers can maximize their budgets.

TruSeq RNA Exome, previously known as the TruSeq RNA Access Library Prep Kit, converts total RNA into template molecules of known strand origin, followed by sequence-specific capture of coding RNA. This provides a low-cost solution for analyzing human RNA isolated from formalin-fixed, paraffin-embedded (FFPE) tissues and other low-quality samples. Affordability and focus—Isolating human transcriptome coding regions maximizes discovery power at a fraction of the sequencing depth.
