Le emissioni di CO2 crescono a dismisura, l'effetto serra incalza e le riserve di petrolio si assottigliano. I grandi gruppi automobilistici rispondono con massicce operazioni di greenwashing e annunciano la realizzazione di motori elettrici a impatto zero, panacea di tutti i nostri mali ambientali. Ma siamo sicuri che l'auto elettrica salverà il pianeta dal collasso climatico? Da dove verrà la corrente "pulita" per ricaricare le batterie delle nuove auto? Serge Enderlin ha esplorato i luoghi dove si sta progettando il futuro della mobilità, è entrato nelle fabbriche di domani, ha parlato con i protagonisti di questa osannata rivoluzione, è salito a bordo di avveniristici prototipi assemblati in cantieri segreti. E ha smascherato i punti deboli dell'auto elettrica. Da Detroit, capitale decaduta dell'impero automobilistico americano, a Shenzhen, laboratorio dell'eccellenza cinese, passando per la Silicon Valley, Tel Aviv e le miniere di litio dell'Altipiano boliviano, Enderlin firma un reportage, in cui, dissolta la cortina fumogena dell'ecottimismo, svela ai nostri occhi una verità più scomoda di quanto siamo disposti ad ammettere.

[Does nature have intrinsic value? Should we be doing more to save wilderness and ocean ecosystems? What are our duties to future generations of humans? Do animals have rights? This revised edition of "Life Science Ethics" introduces these questions using narrative case studies on genetically modified foods, use of animals in research, nanotechnology, and global climate change, and then explores them in detail using essays written by nationally-recognized experts in the ethics field. Part I introduces ethics, the relationship of religion to ethics, how we assess ethical arguments, and a method ethicists use to reason about ethical theories. Part II demonstrates the relevance of ethical reasoning to the environment, land, farms, food, biotechnology, genetically modified foods, animals in agriculture and research, climate change, and nanotechnology. Part III presents case studies for the topics found in Part II.](#)

[Those who survive major earthquakes often report the occurrence of mysterious phenomena beforehand – unusual animal and plant behavior, lightning, strange clouds and malfunctioning electrical appliances. In fact these stories are legendary the world over. But are they merely legends? Are the many people who report them just superstitious or suffering from over-active imaginations? Earthquakes and Animals brings objective science to bear on these old legends. But this is not the suspect science associated with recent attempts to validate UFO sightings. The book places in front of the reader the simple laboratory evidence for the behaviour of animals, plants and objects when they are subjected to intense electromagnetic pulses. In many cases they behave in ways that have been recorded for centuries – and are still reported today – as earthquake-related. Written for both the general public and scientists, Earthquakes and Animals demonstrates experimentally a physical basis for the old earthquake legends. It also adds tantalisingly to the science of earthquake prediction and cautiously suggests a legitimate new field of study – electromagnetic seismology.
