In biology, a type is a particular specimen (or in some cases a group of specimens) of an organism to which the scientific name of that organism is formally attached. In other words, a type is an example that serves to anchor or centralize the defining features of that particular taxon.In older usage (pre-1900 in botany), a type was a taxon rather than a specimen.

Type (biology) - Wikipedia

Why TypeError: object is not subscriptable occur? The reason is a python object is not a iteration type, such as list, tuple or dictionary. However, you get element in this object by its position. For example: eles = True ele = eles[0] print(ele)

Fix TypeError: 'bool' object is not subscriptable in ...

1840 Computing Visual Basic 2 A method is accessed by following the relevant object with a dot and then the name of the method. Properties An object can have properties A property is a quality or characteristic of the object, e.g. the length of the dog ' s tail, the loudness of its bark. If you think of objects as the nouns of VB, then properties are its adjectives and methods are its verbs.

Visual Basic- Objects and collections

In this example, an array book of the type class books and size three is declared. This implies that book is an array of three objects of the class books. Note that every object in the array book can access public members of the class in the same way as any other object, that is, by using the dot operator.

Details - Magazine of zoology and botany - Biodiversity ...

If an object type spec declares only attributes, the object type body is unnecessary. You cannot declare attributes in the body. All declarations in the object type spec are public (visible outside the object type). The following example defines an object type for complex numbers, with a real part, an imaginary part, and arithmetic operations.
